

WHAT IS CLAIMED IS:

1. A method for reducing the formaldehyde and/or cyanide contents in technically produced solutions of sarcosine salts,
5 **characterized in that**
the starting solution is subjected to a thermal treatment in such a way that the starting solution
a1) at an approximately equimolar ratio of
10 formaldehyde and cyanide components of 1:0.9 to 1.1, is adjusted to temperatures between 20 and 120°C,
or
a2) at a non-equimolar ratio of formaldehyde and cyanide components, is heated to temperatures between
15 120 and 200°C,
and
b) is finally cooled down.
2. The method as claimed in claim 1,
20 **characterized in that**
the duration of the thermal treatment is 1 to 300 minute(s) and particularly preferably 40 to 60 minutes.
- 25 3. The method as claimed in either of claims 1 and 2, **characterized in that**,
in the case a1), the starting solution is adjusted, by addition of calculated amounts of formaldehyde or cyanide, to an approximately equimolar ratio of these
30 two compounds.
4. The method as claimed in claim 3, **characterized in that**,
in the case a1), the calculated amount of formaldehyde
35 or cyanide is added in the form of an aqueous solution.
5. The method as claimed in any one of claims 1 to 4, **characterized in that**

the starting solution in the case a1) is adjusted to temperatures between 60 and 110°C and particularly preferably 90 to 105°C.

- 5 6. The method as claimed in any one of claims 1 to 4,
 characterized in that
 the starting solution in the case a2) is heated to
 temperatures of between 140 and 170°C.
- 10 7. The method as claimed in any one of claims 1 to 6,
 characterized in that,
 in the case a2), it is carried out under pressure
 conditions ≤ 10 bar.
- 15 8. The method as claimed in any one of claims 1 to 7,
 characterized in that
 the formaldehyde content is reduced to values < 50 ppm
 and the cyanide content is reduced to values < 10 ppm,
 particularly preferably in a 40% by weight sarcosinate
20 solution.
9. The method as claimed in any one of claims 1 to 8,
 characterized in that,
 before or during the thermal treatment according to a1)
25 or a2), educts, such as, e.g., methylamine, and/or
 byproducts, such as, e.g., ammonia, were separated from
 the starting solution by distillation.
- 30 10. The method as claimed in any one of claims 1 to 9,
 characterized in that
 the sarcosinate solution treated according to a1) or
 a2) is used as raw material for the manufacture of
 creatine.
